SUMMARY

Product Manager with 4+ years of experience driving B2C consumer products across EdTech, FinTech, and Health platforms. 2× Founder with hands-on ownership of retention (D1: 15% → 28%), creator-led growth, and monetization strategy. Shipped consumer products at 1M+ user scale. Strong analytical foundation with SQL-driven experimentation, funnel optimization, and unit economics discipline.

EXPERIENCE

Triveni – Founder & Product Lead

May 2025 – Present

D1 retention up 87%; validated monetization

- Led strategic pivot from AI-first to Teacher-Led model, improving D1 retention from 15% to 28% within 6 weeks.
- Led analysis of user behavior via SQL + funnels to deprecate AI Notes, refocusing roadmap on Quiz-First loop.
- Designed and launched a creator-led PLG sharing loop, growing WAU to a peak of 259 while achieving 70% retention in a key user cohort.
- Led 3 monetization experiments (entry-fee tournaments, gated quizzes, tiered access), validating willingness-to-pay across 2 tiers and establishing early ARPU benchmarks that informed subscription pricing.
- Built an agentic AI pipeline (Agno) for PDF-to-notes and quiz generation with quality evals.
- Defined north-star metrics (activation → retention → creator output) and aligned execution to unit economics.

Isha Foundation – Product Engineer (Product & UX)

Jun 2024 – Mar 2025

Shipped for 1M+ users; protected system at scale

- Built and shipped Flutter features for a consumer app that reached 1M+ downloads in less than 24 hours.
- Designed and implemented a backend traffic management system that prevented cascading failures during a 1M+ user launch, balancing system reliability with product experience goals.
- Partnered with Product to deliver high-fidelity UX, balancing speed, usability, and reliability under scale.
- Acted as bridge between product intent and engineering execution during high-risk launches.

Yelow – Software Engineer (Systems & Funnels)

Jan 2023 – Jun 2024

Improved funnel recovery; enabled FinTech pilots

- Built admin-triggered fallback flows to recover KYC during third-party API failures, improving funnel completion.
- Shipped high-conversion landing page within a 7-day sprint, accelerating PMF experiments.
- Led 10+ banking and KYC integrations for a 500-user fintech pilot, coordinating across vendors and teams.
- Contributed to API strategy and system design, balancing compliance, reliability, and speed.

Mignon – Co-founder

Jan 2022 – Aug 2023

Pivoted to demand-first revenue model

- Led strategic pivot from feature-driven development to demand-first GTM — conducted 20+ salon interviews to identify top-3 booking pain points, redesigned value proposition around salon owner ROI, resulting in measurably higher-quality inbound leads and improved demo conversion.
- Conducted primary user research with 20+ salons to uncover discovery and booking pain points.
- Built push-notification and re-engagement experiments, testing PLG loops and repeat usage hypotheses.
- Owned end-to-end product discovery, experimentation, and early GTM execution.

EDUCATION

University of Horticultural Sciences, Bagalkot

Karnataka, IN

B.Tech in Food Technology (CGPA: 7.9/10)

2016 – 2020

- Founding President, Student Association (80 students); led the body for 3 years and structured year-long inter-house competitions
- Secured INR 10,000 in funding from college administration for student initiatives; acted as student spokesperson with senior administrators and visiting officials

Harvard University (Online)

Remote

CS50: Introduction to Computer Science (Certificate)

Sep 2021

- Completed all problem sets and a final web application project, building a strong foundation in systems thinking and programming

Sainik School Bijapur

Karnataka, IN

Senior Secondary Education (NCC B Certificate)

2009 – 2016

PROJECTS

LabLens — AI Blood Report Interpreter

(Hackathon, Jun 2026)

- Built an LLM pipeline that turns blood report images and PDFs into plain-language summaries with colour-coded verdicts, taking a user from upload to readable result in under 10 seconds
- Tightened classification thresholds to suppress false "Urgent" flags, trading recall for user trust on the reasoning that a missed borderline value costs less than a false alarm in a health context
- Shipped end to end in one day by scoping to a single report format, writing an eval set of 5 sample reports before building, and cutting user accounts/report history to protect the no-storage privacy story and time-to-first-value

SKILLS

Product: Roadmap definition, funnel analysis, activation & retention, north-star metrics, monetization experiments, PLG loops, time-to-first-value optimization, MVP & iterative shipping

Analytics & Experimentation: AARRR framework, SQL-based analysis, A/B testing, metric-driven pivots, pricing & willingness-to-pay experiments, Mixpanel, Google Analytics

Technical: SQL, JavaScript, Python, Next.js, Postman, Supabase, Figma, Notion, ClickUp
